CBS – Control Box Starter – Qty. 2

Summary:

Monoxivent along with HVA Products, Inc. recently supplied the Fiserv Forum located in Milwaukee, WI with a Norfi exhaust system to be used on buses and semi-trucks.

The Norfi system consists of exhaust rails that travel parallel to where the vehicles are parking allowing flexibility to connect the hoses to a variety of vehicles. The exhaust air is captured through hoses and travels inside the rail channel to be evacuated outside.

The rail systems were installed in two locations within the arena, five of the rails (12.5 meters) were installed where the majority of the trucks are unloaded. The other two rails (20 meters) were located in the players parking area for loading of buses and extra truck parking.
